

# DATA EXCHANGE for NetSuite

Data Exchange seamlessly integrates NetSuite with third-party systems, removing the need for the manual duplication of data, ensuring data accuracy and consistency throughout your business.

Automatically transfer information such as: customer records, sales/purchase orders, despatches, product details and stock levels.

## & FEATURES & BENEFITS

### OUT-THE-BOX AND CUSTOMISABLE

Data Exchange can be configured quickly and easily with standard plugins available to integrate NetSuite with platforms such as Amazon, eBay, Magento and FedEx. Data Exchange can also be configured to meet your specific integration requirements.

### CUT DATA ENTRY TIME IN HALF

Having to only update one system means that product changes only need to be made once, cutting data entry time in half.

### OPERATES WITH CSV AND/ OR XML FILES

Data Exchange can import and export CSV, XML and web services via local folders, FTP or SFTP as required.

# SYSTEM INTEGRATION

Data Exchange integrates NetSuite with this well-known ecommerce platform allowing your ERP and online stores to fully integrate.

Connect Amazon stores with NetSuite to automatically transfer data such as sales, customers, stock levels and fulfilment.

Two-way integration between eBay and NetSuite allowing orders, stock and customers to be imported and exported automatically.

Data Exchange can be configured to pass despatch information directly from NetSuite to the FedEx system.

Allows NetSuite to connect directly to the Maitre'D restaurant EPOS system, importing inventory sales and vendor transactions.

Inventory can be exported directly from NetSuite to the Netalogue B2B ecommerce platform.

Integrates Visualsoft with NetSuite using the web developer's API connected to their back-end content management system.

Data Exchange carries information from the Proactis purchase order requisition system, allowing authorised PO's to be automatically generated in NetSuite.

Data Exchange can be fully developed to integrate NetSuite with any third-party systems your business uses.

“

“Having the website integrated fully with our ERP system has saved a colossal amount of time and effort. We are currently loading about 2,000 product lines and expect this to rise to 10,000 in the future.

Eureka Solutions' module has saved us having to upload the details and images of each of these products to the website separately, while also ensuring that there are no errors through duplication of work”.
